

Wood Stone

FIRE DECK 9690

Stone Hearth Deck Oven

All storage boxes and/or access panels must remain easily removable after installation.

Job Name

Model

WS-FD-9690-CL

Item#

Fuel Type

Gas-Fired and Coal-Fired

Hearth Capacity

8" pizzas	48
10" pizzas	28
12" pizzas	20
16" pizzas	12
18" or 20" pizzas	6

Assuming 5-minute cook times, the approximate maximum hourly production capacity can be calculated by multiplying the above numbers by 12.

OPTIONAL ACCESSORIES

- Stainless Steel Storage Boxes
- Stainless Steel Oven Tool Set (with stainless steel hangers)
- Stack-Mounted Exhaust Fan
- Custom Oven-Mounted Exhaust Hood
- Temporary Rigging Casters
- Prepared for facade application
- Wood Stone also carries a full line of accessories for stone-hearth cooking

The Coal-fired Fire Deck 9690 features a standard door opening 60 inches wide x 10 inches high. The cooking surface is 72 inches wide, and 76 inches deep, resulting in 38 square feet of usable deck space. The dense, high temperature ceramic formulation of which the hearth and dome are cast creates a "deep heat sink" within the chamber of the oven. The Fire Deck is unique among deck ovens in that it can easily accommodate six 20 inch pizzas, or 6 full sized sheet pans.

The Coal-fired Fire Deck is a variation of our standard Fire Deck 9690 gas-fired oven. The oven has been modified to achieve an excellent balance of top and bottom heat while burning coal, and to optimize air flow to the coal fire. The coal-fired model utilizes one gas-fired wall of radiant flame on one side of the oven opposite the coal fire, and a thermostatically controlled gas infrared burner beneath the oven deck.

The 4,000-pound, monolithic, cast-ceramic floor sits on 4 inches of rigid insulation and is poured to a thickness of 6 inches. The 2,400-pound, monolithic dome is also cast to a thickness of 4 inches. The hearth and dome are connected by a carefully tensioned steel exoskeleton, which ensures structural integrity and long life.

The body of the oven rests on a 10-gauge steel pan welded to a heavy-duty frame. The oven's ceramic dome is wrapped with at least 2 inches of spun ceramic fiber insulation and enclosed (front, top and sides) with 16-gauge galvanized steel. The oven arrives completely assembled on heavy-duty shipping castors and ready to roll into place.

The combustion products of the gas and coal used to fuel the oven vent through a 12 inch O.D. flue collar located above the doorway. The Fire Deck 9690 can be connected directly to a power-ventilated grease rated duct, or it can be vented using a Listed Type 1 exhaust hood or one constructed in accordance with NFPA 96 and all relevant local and national codes. This model must be vented as a solid fuel appliance.

An ongoing program of product improvement may require us to change specifications without notice.
